

ABSTRACT OF THE DISCLOSURE

1 An apparatus for the gravimetric calibration of multi-channel pipettes
2 contains a balance (37) that has a load receiver (38) configured to support receptacles
3 (13) containing a substance to be weighed. The apparatus has a holder device (10) to
4 support a certain number of the receptacles (13) into which a test liquid is dispensed
5 from the multi-channel pipette. The apparatus further has a transport device (1) for
6 advancing the holder device (10) towards the load receiver (38). The receptacles
7 (13) are seated in the holder device (10) at equally spaced positions and are one by
8 one delivered to and subsequently removed from the measuring device.
